2. Evidence Architecture

How evidence supports claims

E0–E4 assurance — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Metric traceability — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Evidence reuse — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

E0–E4 assurance — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Metric traceability — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

3. Verification

How claims are controlled

Maturity anchors — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Contradictions — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

High-stakes claims — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Maturity anchors — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Contradictions — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

4. Anti-Gaming

How inflation is detected

Policy-only inflation — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Evidence recycling — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Outcome back-casting — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Policy-only inflation — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Evidence recycling — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

5. Evidence Architecture

How evidence supports claims

E0–E4 assurance — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Metric traceability — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Evidence reuse — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

E0–E4 assurance — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Metric traceability — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

6. Verification

How claims are controlled

Maturity anchors — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Contradictions — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

High-stakes claims — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Maturity anchors — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Contradictions — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

7. Anti-Gaming

How inflation is detected

Policy-only inflation — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Evidence recycling — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Outcome back-casting — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Policy-only inflation — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Evidence recycling — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

8. Evidence Architecture

How evidence supports claims

E0–E4 assurance — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Metric traceability — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Evidence reuse — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

E0–E4 assurance — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.

Metric traceability — Demonstration evidence, interpretation, verification and leadership implication are shown using the same canonical ECRI dataset. This is illustrative output; the live engine replaces synthetic observations with institution-specific assessment data.
